can do

Boost your performance with computer-assisted demand management

DEMAND MANAGEMENT SUITE

Your company needs to be able to adapt to rapidly changing market conditions – and align demand for your products or services with your business processes. If you start new projects in an uncoordinated way, you could be endangering your project work as well as your day-to-day business. Key departments can become overloaded with the extra work and lose sight of which tasks need to be prioritized, resulting in important projects running into difficulties.

With the Can Do Demand Management Suite, you get an integrated solution for efficient and effective demand management. You collect, evaluate and prioritize requests from within your company and can see immediately whether and when you'll have the required capacity to work on them. That means you can approve the most important new projects in a controlled way.

Demand Management

Create Demand

cando

You'll always be using the right staff. That much is certain.

PROJECT OVERSIGHT AND CONTROL

The Can Do Demand Management Suite is comprised of two parts that each have their own tiles. The person making the request has tiles to create demands and manage them, while the recipient has access to these along with functions for checking the demands for completeness and for collecting, evaluating, accepting and refusing them.
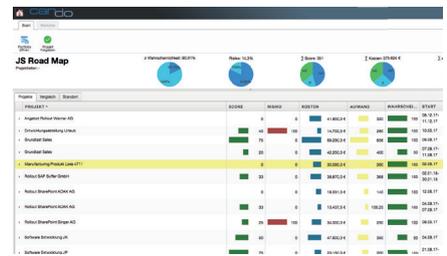

FASTER WORKFLOWS AND FEASIBILITY ANALYSES

With Can Do, you can standardize your demand management process by using consistent forms and evaluation matrices that are tailored to your exact requirements. They help you verify whether the request is aligned with your company's strategy and whether – or when – you'll have sufficient capacity to work on it. That helps you create more transparency, oversight and control in your demand management process.
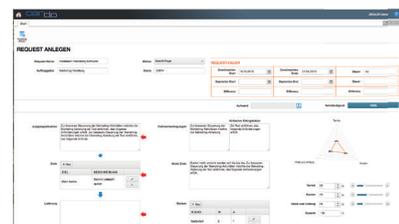

FEATURES AT A GLANCE

Tailored to your specific requirements
- Freely configurable forms and evaluation matrices

Feasibility analysis
- First draft plan prior to approval
- Time estimate (capacity planning)
- Cost estimate

Transparent prioritization
- Traceable evaluation and approval process
