

# *Productive Task Management for Departments* **TEAM STACK**

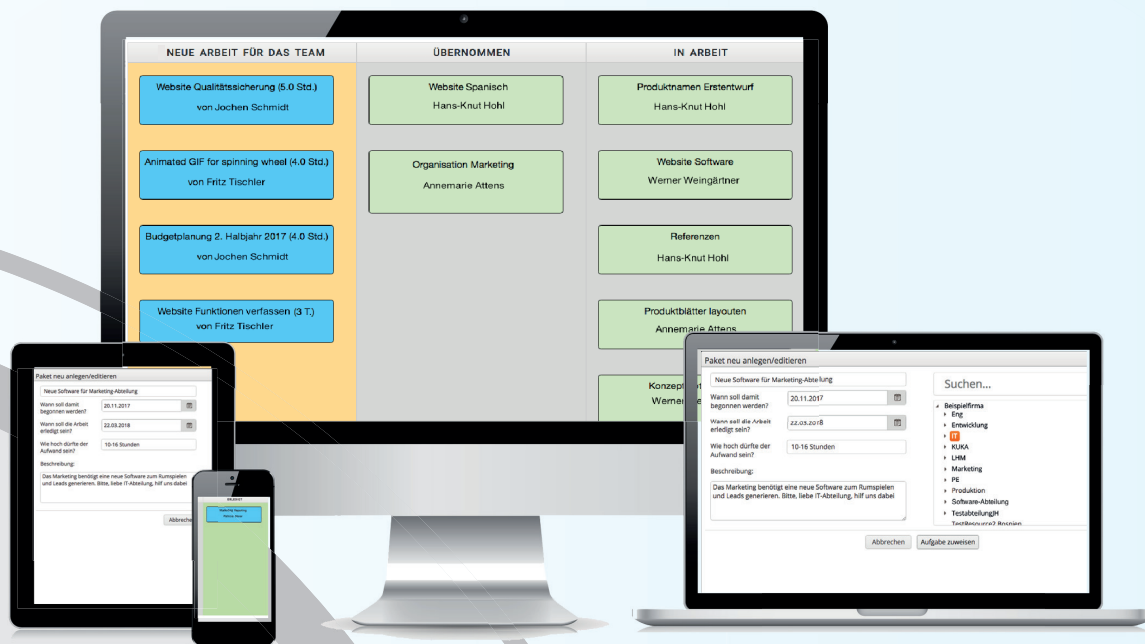

## Monitor your staff deployment with integrated capacity planning

Managing your team's tasks is a dynamic process that can be a challenge for your company. As a department head, you know that tasks unrelated to projects or routine activities need to be manageable so that you can incorporate them into your planning. You should be able to plan these tasks with little organizational effort and have your team complete them in an efficient and verifiable way.

## Can Do Team Stack

This is where Can Do Team Stack can help. It comprises four tiles representing the task creation and management process, along with a clear overview of the tasks. The fourth tile enables you to configure Team Stack.

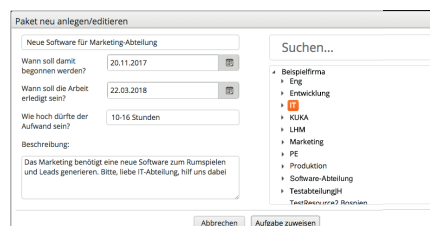

## TEAM TASK MANAGEMENT USING AGILE METHODS

The Can Do team task management app, Team Stack, provides the best possible support for your task management processes. You can create Kanban-based standardized tasks for departments or teams and store

them in a stack. Your team members can then just take on tasks from the stack and complete them – either on their own initiative or coordinated by a team leader.

## KANBAN MODEL FACILITATES COLLABORATION

As a result, the team members in your company always know which tasks they have yet to complete. Your team leaders and department managers can always see what their people are

currently working on and which tasks are still outstanding. Anyone entering a task into the app can track its progress.

## INTEGRATED SOLUTION FOR OPTIMAL CAPACITY PLANNING

When Team Stack is integrated with Can Do resource management, it becomes part of an optimal capacity

planning solution. You always have a realistic view of which members of your team have the time to work on

the tasks you want to assign them. You can also estimate when an assigned task is likely to be complete.

## FEATURES AT A GLANCE

- Increased productivity: the standardized process accelerates task turnaround
- Tailored to your requirements: task forms can be customized to suit your needs
- Simple and intuitive to use
- Visibility: status overview of the tasks in the stack
- Can be integrated with capacity planning: cost/effort estimations and integration with timesheet reporting and employee overview
